

Thomas EMS is proud to debut the Thomas Pediatric Pack

The most organized and complete pre-hospital pediatric pack in the industry.

Main Compartment

Eight separate high visibility removable pouches designed to treat all pediatric patients up to 36kg. Each pouch is designed to accommodate all of the medical equipment necessary to treat a patient in each specified weight range.

All non-weight specific pediatric equipment (BVM, intubation handles, Magill forceps, syringes, etc...) can be stored inside the main inside chamber, or on the interior fold out flap. The fold out flap includes a neo-natal kit, and also features an area to display all quick reference material such as APGAR, Rule of 9, or other important local pediatric treatment information (burn center, poison control, etc...)

Interior Pouches

The interior of each removable pouch is constructed from a dry erase board material, which allows the medic to clearly label all equipment. Each pouch also includes an attached reference medication chart specific to each weight range, and a small vinyl note card size exterior sleeve to quickly and easily monitor expiration dates of all equipment contained within the pouch.

PATENT PENDING

The Thomas Pediatric Pack can also be used in conjunction with all existing pediatric systems.

Fold down front pocket accommodates all mask sizes from neonate through small adult.

Dimensions: 14" x 20" x 9 1/2"

Inside lid section consist of two large clear vinyl pockets designed to store multiple pediatric c-collars and larger equipment.

Made from rugged 1000 Denier Cordura, with a heavy weight fluid resistant nylon base for easy decontamination. Includes both a shoulder strap and carrying handles.

TT105	Thomas Pediatric Pack (w/o supplies)	\$560.00
TT105F	Fill Kit Only	\$690.00
